

BOMB SEARCH KIT

The Bomb Search Kit is an inexpensive kit designed for IED search operation.

It contains a portable video scope, portable drill, as well as an assortment of tools.

When immediate visual inspection behind walls and paneling is required, the portable drill set enables inspection holes to be drilled through all types of material, allowing rapid internal inspection using the wireless snake camera with its obedient cables.

The kit provides a range of tools for removing paneling and inspection covers and is suitable for carrying out general searches in buildings, vehicles and ships.

Large and small adjustable inspection mirrors are also included to facilitate searches in confined spaces.

The Bomb Search Kit is supplied in a fitted carrying case.
